

About Us

Fujitsu has been a strategic supplier to the UK government for over fifty years, we are a global IT organisation that have vast experience and expertise providing industry specific solutions to a wide range of sectors including; Public, Defence & National Security, Private and Transport. We offer IT hardware, traditional workplace and infrastructure services, as well as digital solutions.

Fujitsu is facilitating digital transformation and digital enablement through our new global business brand Fujitsu UVANCE, making the world more sustainable by building trust in society through innovation. The word "Uvance" embodies a concept of making all (Universal) things move forward (Advance) in a sustainable direction. It demonstrates Fujitsu's determination to build new possibilities by connecting people, technology and ideas, creating a more sustainable world.

In the Public Safety Sector, Fujitsu is co-creating solutions with our customers to deliver a connected and digitally enabled workforce, automating workload to free up time and enable better focus on supporting members of the Public.

Creating the best possible digital experience for front line workers is at the heart of our approach to digital workplace solutions, enabling rapid response times using real time data and information, whilst creating a safe and comfortable environment for everyone. Fujitsu is able to leverage our advanced research capability in key technologies including Super Computing and Quantum, Artificial Intelligence and Human Sensing, Blockchain and Digital Identity, Photonics and 5G Networking.

Fujitsu's advanced Artificial Intelligence and Machine Learning technology can support Counter Terrorism initiatives by enabling the detection of patterns in data and video to support cybercrime detection, or the movement of people and objects on standard CCTV feeds, to automatically detect unusual or suspicious behaviour. Alerts are generated in real time when certain behaviours are detected enabling an immediate response, saving the need for officers to watch hours of video footage or trawl through megabytes of data.

Our DIVA (Dynamic Interactive Video Assist) solution enables members of the public to report incidents by using their smartphone to securely transmit video and audio evidence to a helpdesk without needing to download an App.

Our secure Kiosk technology allows an alternative channel for engagement with the public, giving an easy-to-use digital approach to access police services, report crime or even facilitate an ID check. We can use the Kiosk for Use Cases such as "automated bail check-in" and to provide access to Police services out of hours.

Fujitsu's advanced technology has the power to help solve the most difficult operational challenges for our customers and their frontline workers. Business and society will increasingly be driven by data and technology and Fujitsu is here to help you on that journey.
